

"NO disease, including cancer, can exist in an alkaline environment."

Dr. Otto Warburg,
1931 Nobel Prize winner
for cancer discovery

Your Body is Acidic. Here is what you NEED to Do (The Real Truth behind Cancer that You Will Never Hear from Your Doctor)

There are many topics, disagrees and agrees from people for the main reasons of cancer developing. According to Dr. Otto H Warburg which is one Nobel Prize Winner, the cancer is caused by the high oxygen deficiency in the body.

In simple explanation, if the body has deficiency of oxygen then our organism becomes acidic and starts developing cancer cells. He also discovered that cancer cells are anaerobic and cannot thrive in high levels of oxygen or alkaline body.

He says that the normal cancer cannot survive without oxygen but cancer cells can, in fact once he let a cell with 35% oxygen for 48 hours and the cell may become cancerous. Also, the food we consume often determines the pH levels in the body and balances them.

Being a high alkaline liquid, **INTERVENE (Ph9.2 & 9.7)** helps balance and regulate the body's Ph of **7.36**, giving you a **Bullet proof immune system!**

Our body requires balance and the alkaline level should be **7.365**. To devastated acidic **pH levels** usually the unhealthy diet is responsible and many unhealthy toxins and acid-formed foods that people often consume.

The cells and all their normal activities can be interrupted with the imbalanced **pH level** and many diseases can be developed as osteoporosis heartburn, cardiovascular diseases, cancer and diabetes. It accelerates the aging also.

Many bacteria, viruses, parasites and candida can live in our body and we fight against this kind of illnesses, when our environment is alkalized they die immediately.

"The acidity in our body can cause us many problems" – says Robert O. Young in his book, **"The pH miracle"**.

The most important for remaining healthy is the **balance of our pH and proper alkalized body**.
